

Welcome to The Juxtopia Group!

We believe that developing a positive self-image, correcting societal mis-perceptions, and increasing academic proficiency with sound pedagogical approaches will significantly improve and accelerate the learning performance of underserved and disadvantaged groups.

We believe that continual data collection and analysis of empirical learning technology research may contribute data repositories useful in teaching and learning, uncover new and effective pedagogical models, improve methods for measuring learning performance, and form new tools that may improve human learning performance for all people.

We believe that human learning is a lifelong process without boundaries that may be exercised anytime, anywhere, at any-pace, and by anyone.

We believe in you.
